Federal Policy & Business

Senators vow to avert sequestration cuts

Federal Times: Six senators are vowing to work across party lines to head off stiff automatic budgets cuts set to take effect in January. "We are committed to working together to help forge a balanced, bipartisan deficit reduction package to avoid damage to our national security, important domestic priorities, and our economy," Sens. Carl Levin, D-Mich., John McCain, R-Ariz. and four other lawmakers wrote in a Sept. 21 letter to Senate leaders. "All ideas should be put on the table and considered."

USPS prepares for second default in two months

Government Executive: The U.S. Postal Service will default this week on a \$5.6 billion congressionally mandated obligation to prefund retiree health benefits, marking the second time in two months the cash-strapped agency has done this. The Postal Service last month failed to pay \$5.5 billion for its fiscal 2011 prepayment obligation, which originally was due September 2011 but was deferred by Congress until Aug. 1.

Hey, Big Saver!

The New York Times: If you want to know what the future of the American economy looks like — when the unemployment rate will return to below 6 percent, or when annual growth will climb back above 3 percent — it's helpful to stop thinking for a moment about those families in serious financial distress. That's because the future of the U.S. economy relies, in large part, on another group of people living in fear: the millions of Americans who have a little disposable income.

The Farm Bill Expires Next Week. Does It Matter?

Governing: The farm bill, one of the most complicated and wide-ranging pieces of legislation that Congress deals with every few years, will expire next week. But does it really matter? Not much -- at least for now. In recent weeks, Washington wonks have been scratching their heads to determine what, exactly, the impact of the bill's expiration will be.

Linux in the Mainstream: Growing Deployment of Business-Critical Workloads

Linux is one of two operating systems that rode the x86 server market over the past decade and established itself as a mainstream solution for supporting deployments of business-oriented application workloads. This upward progression has led Linux to its current role as a platform capable of supporting business-critical workloads on a broad variety of hardware architectures.

This IDC whitepaper takes a look at the growth of Linux as a server operating system and how deployment form factors have changed over time. Today, commercial Linux has become a key platform across many workloads. This paper considers both workload data and the ecosystem that has grown up to support the opportunity for Linux deployments, including application software, application development and deployment software, and infrastructure software.

Automating to Transform Legacy IT Operations, While Minimizing Risk

An i360Gov Special Report.

Under near-constant pressure to adapt to change and 'innovate' with less, government agencies are seeking new ways to adapt and transform legacy IT operations.

Many are finding they must work hard to mitigate risks associated with change in those user migration efforts, utilizing key best practices tools and procedures that will help ensure more streamlined, efficient implementations. In many cases, agencies are working to accomplish migration from Windows XP to Windows 7, which must be completed soon as support for XP is slated to end in the coming year. To deal with this situation, agencies are working to reduce the cost of managing application compatibility, without compromising on output.

Download this new i360Gov special report to learn more, including case studies from your peers in government.

Why should I care about PDF application security?

Today, government agencies battle cyber attackers who are intent on stealing data, crashing systems, damaging reputations, or simply showing off hacking skills. This paper discusses:

The application security measures customers should be looking for when selecting software to prevent attacks, including the concept of "layered defense in depth." Security experts widely agree that the best defense is a layered defense in depth because it protects on multiple fronts using tools built into both the application and the OS.

The results of third-party security testing for Adobe® Acrobat® X and Adobe Reader® X software when it comes to protecting organizations from attacks that could lead to disastrous consequences. This white paper is an Adobe-authored piece based on research conducted by iSec. The original iSec research paper, due to its technical complexity, will be made available to Sales on a request-only basis.

Why the future of the cloud is open

Choosing how to build a hybrid cloud is perhaps the most strategic decision IT leaders will make this decade. It's a choice that will determine their organization's competitiveness, flexibility, and IT economics for the next 10 years.

That's because, done right, a cloud delivers strategic advantages to the business by redirecting resources from simply maintaining the status quo to true innovation. But only an open cloud delivers on the full strategic business value and promise of cloud computing. Download the whitepaper to learn more.

Linux versus Microsoft Windows

In a currently tight budgetary climate, government organizations are working to function as cost-effectively as possible. Agencies also face regulatory mandates for energy efficiency and data center consolidation that are driving them to consolidate data centers, servers, applications and services, to reduce costs. IT managers are moving to commodity x86-based servers to replace legacy RISC servers.

In the enterprise computing arena, of the server operating systems that were prevalent a decade ago, only two are likely to dominate by 2015 - Linux and Microsoft Windows, according to research from IDC.

Managing Government Records Directive: Next Steps for Compliance

Wed, October 17th, 2012 at 2:00pm EST

On August 24th, the Managing Government Records Directive was issued to mark the beginning of an Executive Branch-wide effort to reform records management policies and practices and to develop a 21st century framework for the management of Government records. Attend this complimentary i360Gov educational webinar and learn from leading experts how to implement a robust records management framework to eliminate paper and move decisively toward electronic recordkeeping.

Our panel of experts will share the latest techniques and technologies federal agencies can employ to comply with this Presidential Directive. Specifically you will learn how to:

How to build a business case for electronic records management
 Convert paper records into electronic searchable information
 Capture and process all documents, including paper and electronic formats, to reduce processing time
 Manage all permanent records in an electronic format and how to accession them
 Use technology to reduce the burden of records management
 Embed records management requirements into cloud architectures

Achieving Transparency through Archiving and eDiscovery

Learn how public sector organizations are utilizing archiving and eDiscovery technology to lower costs and risks, address legal challenges and make compliance with FOIA productions more efficient.

Unfortunately, ensuring that government data is accessible for FOIA and litigation remains a thorny challenge and becomes increasingly challenging when data is created and travels across multiple mediums. However, government organizations can implement technology to reduce the risks related to eDiscovery and FOIA compliance. Moreover, once in-house capabilities are adopted, they can be used for both FOIA and litigation.

eDiscovery is an important issue for both federal and state and local agencies. Not only has information governance and eDiscovery recently been addressed in the Presidential Mandate and the Digital Government Strategy, but NASCIO has placed eDiscovery in the top ten list for 2012, especially as related to records management, archiving and digital preservation.

Speakers include:

Allison Stanton, Director of E-Discovery, Office of the Assistant Attorney General, Department of Justice, Civil Division
 Joan Moubleaux, J.D., M.L.I.S., an information professional within NOAA's Fisheries Restoration Center
 Allison Jane Walton, eDiscovery Counsel in PMM, Symantec Corporation

Download this on-demand webinar to learn how the right archiving and eDiscovery tools and workflows:

- Can execute a common classification and retention schedule across in the archive
- Perform federated search across critical data sources
- Bring context and relevance to information to help individuals and organizations find what information they need, when they need it, saving time and money
- Enable government entities to quickly adapt to the new federal mandate, while simultaneously reducing risks in crucial areas such as: legal/litigation services, investigative operations and in improving the production time for Freedom of Information Act (FOIA) requests.

Enabling Smarter Cities with the IBM Intelligent Operations Center

City leaders around the globe are seeking new ways to sustain high service levels to their residents and businesses. To continue providing their constituents opportunities for prosperity and growth, leaders must find innovative ways to connect and improve their core urban systems, from transportation to water to public safety to healthcare and city operations. Join us for an in-depth look at how IBM is helping cities drive sustainable economic growth and deliver citizen centered services by leveraging information to make better decisions, anticipating problems to resolve them pro-actively, and coordinating resources and processes to operate effectively. The IBM Intelligent Operations Center, the cornerstone of our expanding smarter cities solution portfolio, can help urban leaders make their cities a better place to live and do business.

Analytics Solutions for Public Safety: Creating a Better Place to Work and Live

Cities need new, smarter ways to protect and serve their citizens. IBM smarter cities solutions for public safety are designed to

integrate and analyze information to help agencies predict and prevent crime, respond rapidly to incidents, coordinate efforts with other teams and improve the efficiency of case management. By offering a full range of information management, collaboration, visualization and analytics capabilities, smarter cities law enforcement solutions can deliver virtually immediate value and provide a foundation for adding further competencies over time. With these solutions, cities can build an intelligent infrastructure that helps improve operational efficiency and provide a safer, more desirable environment for citizens. This webcast is available on demand 24x7 for your convenience. Register now!

Leveraging Technology to Modernize the Tax Collection Process

According to the Center for Digital Government's 2010 Digital States Survey, 16 percent of states listed tax system modernization among their top five technology priorities.

Attend this complimentary i360Gov one-hour educational webinar to find out how leading state and local government agencies are modernizing their tax and revenue processes by combining intelligent capture with process management to dramatically reduce costs, errors, and risks associated paper. Automating your paper-based tax processes will put funds in your coffers more quickly and help your jurisdiction balance the budget.

Specifically, you will learn how to:

- Capture savings by dramatically shortening the time needed to process tax and revenue collections.

- Reduce your document processing, storage, and retrieval costs by removing the dependency on paper.

- Consolidate and replace antiquated scanning systems so that you can collect all of the revenue you are owed, quickly and efficiently.

Learn how other state and local agencies modernized their tax collection process by implementing intelligent capture solutions.

Energy - Policy & Technology

Coal vs. natural gas: It's complicated

Houston Chronicle: The glut of natural gas unleashed by hydraulic fracturing - and the resulting low prices - make it seem like a no-brainer: Ditch coal-fired electric plants, with all their baggage about air pollution and water consumption, and switch to natural gas. Trends over the past year suggest that's starting to happen nationally, as natural gas has overtaken coal for generating electricity.

[Read More](#) | [Share](#):

US DoD to Spend \$1.8 Billion on Clean Energy by 2025

Clean Technica: According to the latest report published by Colorado-based Pike Research, the US Department of Defense is expected to spend \$1.8 billion on clean energy by 2025. The clean energy programs also include conservation measures which are expected to increase steadily over the next 12 years. The various branches of the U.S. Department of Defense (DoD) combine to become one of the largest consumers of energy in the world, with consumption of around 3.8 billion kWh of electricity and 120 million barrels of oil annually, totalling \$20 billion spent on energy directly per year.

[Read More](#) | [Share](#):

EPA Says Wyoming Fracking Results Are Consistent

The Wall Street Journal (online registration required): The Environmental Protection Agency said new government tests of groundwater near Pavillion, Wyo., have yielded results similar to data it released last year, when it suggested chemicals in the water were linked to hydraulic fracturing. The EPA's contention was dismissed by Encana Corp., the natural-gas company operating in the area, which said the EPA was still offering a "flawed" interpretation of test results.

[Read More](#) | [Share](#):

Adapting Gas-Fired Power to a Greener Grid

The New York Times: Making electricity from natural gas is cleaner than making it from coal or oil, but as gas gains a bigger market share in the business in the United States and elsewhere, the idea of what constitutes a good generator is shifting. General Electric announced a line of new models on Wednesday, with two interesting environmental twists. One is efficiency. New natural gas plants burn the fuel in something that resembles a jet engine that is chained to the ground and turning a generator. Over the years, as the technology of such models has improved, they have been converted a given quantity of gas to larger and larger amounts of electricity.

State & Local Government - Policy & Technology

Cities and Counties Try Facebook for Government

Government Technology: Steve Craig, the 311 director of Somerville, Mass., believes that social media is a handy delivery tool for city service — but it's technically one that jurisdictions can do without. Somerville isn't one of those jurisdictions, though. "I don't think you absolutely need it to make a system work, but it just makes sense," Craig said. "It's something that there's a high demand for, so I don't see the reason someone would go down the path of 311 and not factor this into their overall plan."

PA: Witnesses to detail barriers to Pa. voter ID law

USA Today: HARRISBURG, Pa. (AP) -- Lawyers hoping to persuade a judge to order a halt to a new Pennsylvania law that requires voters to show photo identification at the polls are bringing people to court today to testify about hurdles they have encountered trying to get a valid ID. The testimony in the hastily arranged hearing is expected to last much of the day. After that, all eyes will be on Commonwealth Court Judge Robert Simpson, who hinted after the hearing's first day this week that an injunction is possible.

Education - Policy & Technology

New Mobile App for WebStudy LMS Users

Campus Technology: A new mobile app for Android and Apple smartphone users of WebStudy's learning management system is now available. WebStudy, a learning management provider located in Wyncroft, PA, partnered with CollegeMobile to create WebStudy Mobile. The new app includes a number of features designed to make it interactive, said Curt Corbi, WebStudy's chief

technology officer, in a prepared statement released Tuesday by the company. "Since the application is not 'browser based,'" said Corbi, "it goes beyond informational to interactive, allowing students to participate in class forums and read, send e-mail while heading to class on the train or waiting for the bus."
